PROJECTS

Lateral Load Performance Of Multi-storey Steel Building With And Without Bracing On Staad Pro

- Performed structural analysis of a multi-storey steel building in STAAD.Pro to evaluate the impact of various bracing configurations under wind and seismic loads.
- Conducted comparative assessments of models with and without bracing to determine their effect on lateral stability and deflection control.
- Found that centrally placed cross bracing provides superior resistance to lateral forces, significantly improving structural stiffness and serviceability.
- Highlighted the applicability of shear walls and moment-resisting frames as alternative lateral loading resisting systems.

Performance Evaluation of Stone Column using Fly Ash-Lime mixture and Fly Ash-Cement Mixture

- Investigated the effect of fly ash lime content on the shear strength of stone columns.
- Analysed the impact of curing period on the strength characteristics of stone columns.
- Determined the Optimum Moisture Content (OMC) and Maximum Dry Density (MDD) of the fly ash lime mix.
- Evaluated the behaviour and performance of fly ash lime reinforced stone columns.
- Utilised industrial waste materials (fly ash and lime) to enhance ground improvement efficiency and promote sustainable construction.
