PROFILE: Natural Pozzolans for high performance

Investigated the development of high-performance concrete by partially replacing cement with metakaolin in compliance with ASTM standards, focusing on mechanical and durability properties. Achieved higher compressive strength at 28 and 56 days, along with reduced permeability, lower chloride ion penetration, and enhanced resistance to sulfate attack.

Addressed the slight reduction in workability through the use of superplasticizers, ensuring practical applicability while improving long-term strength and durability.
