PROFILE: Site Execution

Completed a Summer Internship in Site Execution at B G Shirke Construction Technology Pvt. Ltd., working on the CIDCO Project-IV — a large-scale residential housing project built using precast construction technology.

Worked closely with the site execution team to understand end-to-end project delivery, from precast manufacturing to on-site erection. Studied structural and architectural drawings to understand how design translates into execution on site. Observed the full erection process for wall panels, beams, and slabs, including techniques like Push-Pull Jacks and NS-2 grouting for pocket filling, along with Total Station surveying for accuracy checks.

Gained cross-functional exposure by spending time with the Precast Manufacturing Yard, Quality Control Laboratory, IMS (Integrated Management System), and Safety teams, understanding how each function contributes to timely and quality-driven project delivery. Regularly interacted with project managers, engineers, and site supervisors to learn how coordination between teams drives execution on a live construction site.
